

TRAINING

The ROI of Power BI Training

The bad news: your analysts work all day in Excel, a tool that is 35 years old. The good news: Power BI was designed by Microsoft to be the “modern Excel,” a tool for the era of digital, agile, and big data.

With Power BI and P3:

YOUR ANALYSTS CAN:

Reclaim at least 20% of their productive capacity each month

Deliver on requests in a fraction of the time it takes in Excel

Easily integrate data from every system at your company

Produce smart, interactive dashboards

Parlay their Excel formula know-how into modern analytical powers

YOUR TEAM CAN:

Replace month-end reporting with up-to-date monitoring

Focus the power of enterprise-grade tools on your team’s specific needs

Supplement raw dollar and unit metrics with actionable KPIs

Harvest untapped potential of your existing headcount

YOU CAN:

Replace dozens of scattered reports with 1-stop dashboards

See across your entire business on a single screen

Easily answer drill-down and follow-up questions yourself

Perform all of these tasks on desktop, tablet, or mobile

“Power BI is a rare piece of software that actually delivers on its promise, and we are specialists in teaching it to the Excel crowd.”
